Description

Aircrack-ng is a complete suite of tools to assess WiFi network security.

It focuses on different areas of WiFi security:

- **Monitoring:** Packet capture and export of data to text files for further processing by third party tools
- **Attacking:** Replay attacks, deauthentication, fake access points and others via packet injection
- **Testing:** Checking WiFi cards and driver capabilities (capture and injection)
- **Cracking:** WEP and WPA PSK (WPA 1 and 2)

All tools are command line which allows for heavy scripting. A lot of GUIs have taken advantage of this feature. It works primarily on Linux but also Windows, macOS, FreeBSD, OpenBSD, NetBSD, as well as Solaris and even eComStation 2.

Fresh news

Now using GitHub Discussions ⁶

Dec 22

We're moving from our old trusty forum to [GitHub Discussions](#) partly due to the maintenance burden, which means new posts should be opened in the [Discussions](#) tab of our [repository](#). The old [forum](#) will become a static archive so the links to the posts won't become 404.

Aircrack-ng 1.7 ^{10 May 22}

After more than 2 years, we are making a release with a decently large amount of fixes, improvements, and additions. We

Under the spotlights

WiFi penetration testing training course

Learn WiFi penetration testing with the author and lead developer of Aircrack-ng. [WiFi Exploitation 101](#), covers topics ranging from WiFi basics to WPA Enterprise exploitation, and is available as a 1-day live online class, with 10 hands-on labs.

Injection, -1 channel and other capture issues

If you are having issues injecting or if you are receiving an error message talking about channel -1

also broke the 4000 commits barrier, and this release has more than [400 commits](#).
