

Defacement

Sub-techniques (2) 

Adversaries may modify visual content available internally or externally to an enterprise network, thus affecting the integrity of the original content. Reasons for [Defacement](#) include delivering messaging, intimidation, or claiming (possibly false) credit for an intrusion. Disturbing or offensive images may be used as a part of [Defacement](#) in order to cause user discomfort, or to pressure compliance with accompanying messages.

ID: T1491

Sub-techniques: [T1491.001](#), [T1491.002](#)

Tactic: [Impact](#)

Platforms: ESXi, IaaS, Linux, Windows, macOS

Impact Type: Integrity

Version: 1.4

Mitigations

ID	Mitigation	Description
M1053	Data Backup	Consider implementing IT disaster recovery plans that contain procedures for taking regular data backups that can be used to restore organizational data. ^[1] Ensure backups are stored off system and is protected from common methods adversaries may use to gain access and destroy the backups to prevent recovery.

Detection Strategy

ID	Name	Analytic ID	Analytic Description
DET0238	Defacement via File and Web Content Modification Across Platforms	AN0662	Adversary modifies website or application-hosted content via unauthorized file changes or script injections, often by exploiting web servers or CMS access.
		AN0663	Adversary gains shell access or uploads a malicious script to deface hosted web content in Nginx, Apache, or other services.
		AN0664	Adversary modifies internal or external site content through manipulated application bundles, hosted content, or web server configs.
		AN0665	Adversary defaces internal VM-hosted portals or web UIs by modifying static content on datastore-mounted paths.
		AN0666	Adversary uses compromised instance credentials or web application access to deface content hosted in S3 buckets, Azure Blob Storage, or GCP Buckets.
