HISTORY

Initially, the manual page entry for the "openssl cmd" command used to be available at [cmd\(1\)](#). Later, the alias **openssl-cmd(1)** was introduced, which made it easier to group the openssl commands using the [apropos\(1\)](#) command or the shell's tab completion.

In order to reduce cluttering of the global manual page namespace, the manual page entries without the 'openssl-' prefix have been deprecated in OpenSSL 3.0 and will be removed in OpenSSL 4.0.

The **engine** command was removed in OpenSSL 4.0.
